ABOUT ME

Frontend Developer with commercial experience in **React** and a primary focus on the **Angular** ecosystem. I handle the client side from idea to release: designing user flows, creating **UI/UX mockups** in Figma from scratch, building responsive layouts, and writing modular architecture with strict typing. To speed up routine tasks, I effectively apply modern AI tools.

WORK EXPERIENCE

Frontend Developer / Project Work

Oct 2025 - Present

Key Project: Damaged Car Online Auction Platform (B2B / B2C)

- Designed user flows from scratch and created the full UI/UX mockup of the platform in Figma (filterable catalog, live bidding card, admin panel).
- Building a modular client-side application in Angular using Standalone components, OnPush strategy, and a custom DI hierarchy with tokens and providers.
- Separated reactive logic: async streams, live search, and bid updates run on RxJS, while synchronous UI state is managed with Angular Signals.
- Implemented strictly typed Reactive Forms for lot creation with custom controls (ControlValueAccessor), functional HTTP interceptors, and route guards.

Stack: Angular, TypeScript, RxJS, Signals, Tailwind CSS, Taiga UI, Figma.

Frontend Developer | HOUSE Group LLC

Aug 2024 - Sep 2025

- Developed and maintained client-side web applications and mobile mini-apps within a cross-functional commercial outsourcing team.
- Refactored legacy codebases, fixed bugs, optimized page load performance, and participated in team code reviews.
- Created and refined UI mockups in Figma, built responsive cross-browser layouts, and integrated the frontend with REST APIs.

Stack: React, JavaScript, TypeScript, HTML, CSS, SCSS, Chakra UI.

PET PROJECTS

ShavaBear - Telegram Mini App (@shavabearbot)

June 2025

- Designed the UI in Figma from scratch and built a food delivery application running directly inside the Telegram messenger.
- Implemented a dynamic menu, custom shawarma builder with ingredient selection, shopping cart, checkout flow, and order history via REST API.
- Adapted the interface for mobile WebView clients and configured the build pipeline with Vite.

Stack: React, TypeScript, Redux, Chakra UI, REST API.

SKILLS

CORE FOCUS

Angular · TypeScript · RxJS · Signals · React · Figma UI/UX · Tailwind / UI

LANGUAGES & LAYOUT

- TypeScript
- JavaScript
- HTML5
- CSS3
- SASS / SCSS
- BEM

FRAMEWORKS & STATE

- Angular
- Signals
- RxJS
- React
- Redux Toolkit
- REST API

UI / UX & STYLING

- Figma
- Tailwind CSS
- Taiga UI
- Chakra UI
- Material UI
- Responsive

AI TOOLS

- Google Antigravity
- Gemini (Argon)
- DeepSeek / ChatGPT

ENVIRONMENT & BACKEND

- Vite
- Angular CLI
- Git / GitHub
- Docker
- Linux
- Node.js
- PostgreSQL
- Postman

ACADEMIC BASE

- Python
- C++ / C#
- Unity
- Godot

LANGUAGES

Russian

English (B1)

EDUCATION & COURSES

T-Education (T-Bank): Angular Development Intensive (2025)
Minsk College of Business: Information Technology Software, Software Technician (2021 - 2025)

ACHIEVEMENTS

VI Republican ProfSkills Competition: 2nd place in "Web Design and Development"
End-to-end UI/UX design and frontend implementation across all personal products.
